Students in Lehigh’s MS in Accounting and Information Analysis (MSAIA) program learn to use accounting information and technology to improve business processes and forge business solutions.

**Focal points include:**

- Understanding the business framework
- Advanced communication skills
- Strategic use of technology
- Exposure to business subjects in complementary areas
- Specialized accounting knowledge
- Consulting skills
- Advanced technical information systems skills
- Leadership
- Globalization

**Why a Lehigh MSAIA?**

- Our one-year program builds on a student’s strong undergraduate accounting background.
- Students without an undergraduate accounting degree can generally complete the MSAIA program in two years.
- The MSAIA program provides graduates with the necessary educational requisites for licensure as certified public accountants (CPAs) within the United States and its territories.
- An integral component of the MSAIA program involves partnering with public accounting firms, consulting organizations, and other corporate partners. Professionals from these firms present materials alongside professors and interject their unique experiences and understanding of practical issues to enrich the learning experience.

Lehigh’s M.S. in Accounting and Information Analysis program provides students the unparalleled opportunity to expand the depth and breadth of their accounting and business knowledge through innovative coursework and mentored accounting research. The program continues to be a strategic source for entry level recruits at the firm as graduates that join PwC, equipped with a fifth year of accounting and business education, enter the field of accountancy more professionally mature and fully prepared to meet new challenges and uncover new opportunities to expand their knowledge of accounting. We continue to come to Lehigh knowing we will find hard-working students who will succeed once hired.
