ABSTRACT

Robotic Picking Strategies for the Changing Fulfillment Landscape

*Eric Catlin – Sr. Director, Operations at DHL Supply Chain*

New fulfillment models can deliver almost anything to your door in less than an hour. These models are changing the paradigm of a customer having to choose between delivery cost, speed and quality. In today’s warehouse operations, lightning-fast fulfillment is king. The surge in e-commerce and omni-channel is mandating all companies to pick, pack and ship faster than ever before. However, without the right methodologies, tools or staff to support this new norm, warehouse operators are struggling to keep clients, customers and their bottom-lines happy. With emerging robotic picking techniques, warehouses are doing more with less, powering the next generation of warehouses. In this session you’ll learn about the various picking techniques innovative warehouses are using, case studies and the ROI from these new picking methods.
