**ABSTRACT**

**Improved supply chain performance through quick scan supply chain audits**

*Prof. (FH) Di(FH) Dr. Markus Gerschberger,*  
*Professor for supply chain management,*  
*Head of Research Department “Supply Chain Management”,*  
*University of Applied Sciences Upper Austria*

“Through detailed, standardized and joint analysis of material and information flows as well as respective decision-making processes within the supply chain major improvement potentials can be identified.”

QSAM – Quick Scan Audit Methodology is a standardized methodology developed and applied by a network of universities. Until now more than 130 supply chains are analyzed, and Markus will explain the basic procedure as well as real case examples of improvement potentials which were identified and leveraged through the application.
