Markus Gerschberger is professor for supply chain management at University of Applied Sciences Upper Austria and heads the research department “Supply Chain Management” at Logistikum Steyr.

Markus holds a Doctorate in Social Sciences from the Vienna University of Economics. Since 2008, he has headed research groups in the field of Supply Chain Design with project volumes in excess of €2.5 million. He has research interests in the development of systematic methods to identify the most important nodes (suppliers, customers, logistical infrastructure) in the supply chain and the most important individual and organizational capabilities to stay competitive under fast changing environmental conditions.

Markus has also extensively researched in the areas of supply chain complexity, risk and resilience. He has more than 40 publications in refereed journals, books and conference proceedings. He was honored in 2013 with Emerald’s highly commended paper award and as first-runner up for the Austrian Logistics price. In 2011, he was awarded as young researcher of the year of the University of Applied Sciences Upper Austria.

Logistikum Steyr is the largest research competence center in the area of logistics and supply chain management in Austria with more than €5 million ($ 6.5 million) in research funds.
